Weekly Weather Crop Report

Week ending September 24, 2006

Released: 3:00 P.M., September 25, 2006

According to the National Agricultural Statistics Service in Mississippi, there were 4.8 days suitable for fieldwork for the **week ending Sunday, September 24, 2006**. Rainfall this week has caused mixed-feelings for cattle and crop producers. Row crops that were starved for water most of the season are now experiencing a delay in harvesting caused by the recent rains. Hay harvesting continues with a growth spurt in a few areas of the state. Armyworms are still a concern for farm operators who plan on planting cool-weather crops. Soil moisture was rated 24 percent very short, 24 percent short, 43 percent adequate. and 9 percent surplus.

Crop progress for week ending 09/24/06

Crop	This week	Last week	Last year	5-year average
	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>
Corn, harvested	99	97	93	92
Cotton, open bolls	97	95	93	92
Cotton, harvested	43	30	17	18
Hay-Warm Season, harvested	94	93	98	94
Peanuts, harvested	15	10	--	--
Rice, mature	98	93	95	97
Rice, harvested	84	64	55	68
Sorghum, mature	100	100	100	100
Sorghum, harvested	100	99	99	95
Soybeans, turning color	99	98	99	95
Soybeans, dropping leaves	97	93	93	86
Soybeans, harvested	87	82	76	62
Sweet Potatoes, harvested	40	31	44	40
Winter Wheat, planted	8	2	--	6

Crop condition for week ending 09/24/06

Item	Very poor	Poor	Fair	Good	Excellent
	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>
Cotton	12	20	29	30	9
Livestock	17	19	29	30	5
Pasture	20	29	28	22	1
Peanuts	2	5	34	59	0
Sweet Potatoes	2	24	39	29	6

Comments

“Most cattlemen have started feeding some hay to their herds. I look for supplies to be low in mid to late winter. Showers have brought enough moisture to start some winter grazing crops for the cattle. Corn harvesting is over, there are some mid to late season soybeans that are still in the field, and cotton producers are hoping that the rainfall will hold off until they get their crop out.”

— Jimbo Burkhalter, Tallahatchie

“Group V soybean yields have been better than expected. Most irrigated Group V soybean yields have been running from 45 to 70 bushels per acre. Most irrigated cotton yields have also been better than expected. Furrow irrigated cotton yields have consistently produced over two bales per acre.”

— Jerry Singleton, Leflore

“Much needed rain came for some on Saturday night. Much more rain is needed to obtain the necessary soil moisture.”

— Ruby Rankin, Kemper

“Cotton harvesting is in full swing! The yields in many fields are going to surprise those who dared an early production. Final yields will be determined when cotton is in the modules. The soybean harvest is progressing well but yields are varied. We will see when the harvest has been completed.”

— Bill Maily,Hinds

“Hay harvesting continues. The ground is being prepared for cool season forages; however, farmers remain tentative about planting. Many operators are afraid of armyworms, dry conditions, and blast disease. Additional rains will improve their confidence.”

— Allen McReynolds, Wayne

“Rains that are moving through this weekend will supply much needed moisture to hay fields, pastures, and fields being planted to cool season crops. However, these same rains are causing problems for row crop farmers who are already hurt by this year's drought. Harvesting operations will be halted, and further crop losses will be the result.”

— Ernest Flint, Attala
